

# NBME® SELF-ASSESSMENTS

## COMPREHENSIVE BASIC SCIENCE SELF-ASSESSMENT (CBSSA)

### LONGITUDINAL REPORT

Name: Student A

Test Date: 3/24/2022

#### Interpreting Your Results:

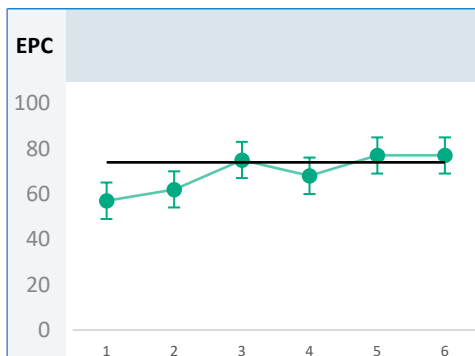

- You may use this report to review your total test and content area performance over time. The following pages show results from up to six previous Comprehensive Basic Science Self-Assessment (CBSSA) administrations purchased on or after February 23, 2022.
- The **green circles** represent your equated percent correct (EPC) scores—the percentage of the content that you have mastered. EPC scores are statistically adjusted to account for slight variations in exam form difficulty, and may be slightly lower or higher than the actual percentage of questions you answered correctly on each form.
- The **vertical lines** represent the precision of the scores. If the vertical lines for two scores overlap between administrations, this means that your performance was not significantly different on those administrations.
- The **black line** represents the average estimated performance of the 2020 cohort of Step 1 first-takers from LCME-accredited medical schools on CBSSA.

	Test Date	Form	Total Score
1	02/23/2022	25	60
2	03/02/2022	26	64
3	03/09/2022	27	78
4	03/16/2022	28	72
5	03/20/2022	29	79
6	03/24/2022	30	79

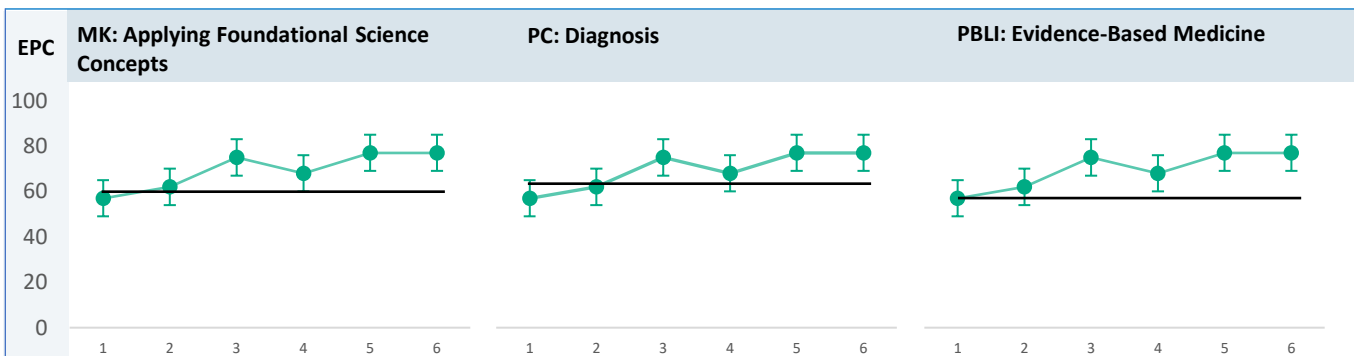

This is a **preliminary sample** showing the new longitudinal results examinees will receive after taking CBSSA.

Although the design of the official report may be slightly different, the same graphs will be included.
