

INSIGHTS Overview

On-screen: [NBME insights overview.]

The insights experience is unique to every user. NBME is also dedicated to improving this product over time. Therefore, your views and features may be different from the ones covered in this video.

On-screen: [NBME Demo - My exams tab.]

Insights is a secure online dashboard that provides examinees with direct access to NBME self-assessments, subject exam, and customized assessment services results in a single interface. With Insights, examinees can dig deeper into their performance by reviewing question details across multiple assessments, as well as tracking longitudinal performance more easily. Let's review the insights experience.

On-screen: [My Exams, Exam results, Question details, Results Comparison.]

Insights is driven by the four tabs at the top of the page. Each tab provides a unique view based on the exams completed.

My exams presents a table of all exams completed by the examinee exams with Associated Performance feedback also provide links for directly downloading reports. All columns within this table and all tables displayed in insights are sortable by clicking on the column. Header tables can also be exported using the menu options feature.

On-screen: [Exam Results tab.]

Exam Results shows a detailed view of exam performance and essential score interpretation information. The exam take selector at the top of the screen is used to show results for different exams. Content area score comparisons are displayed for exams that provide these results. Comparisons with a red flag symbol indicate potential areas of focus. These suggested content areas for further study are based on the examinee's performance and the overall proportion of the content area on the exam selected. The number of content areas displayed and how they are grouped depends on the type of exam. For example, comprehensive basic science and comprehensive clinical science exams flag up to three areas of focus for systems and disciplines separately. Subject exams do not make this distinction and instead flag up to five areas of focus.

On-screen: [Question details tab.]

Question details enables examinees to review question level performance across exams and by shared content areas. The assessment type, exam type, and exam take selectors at the top of the screen are used to limit the number of questions displayed. The choices in these selectors also affect the question details available for the assessment type selected. These results can be further refined using the correct and incorrect response selectors, as well as the content filters located to the right of the table. To limit filter results to only the value selected, click on show selected values at the bottom of any filter dropdown. Please note that self-assessments present more detailed question level information than any other assessment type. This includes the sequence in which the question appeared on the exam time spent per question in seconds and links to individual answer explanations.

For subject exams, the table presents content, category information, and the national percentage of examinees who answered each question correctly. The table for both proctored and practice customized assessments presents content category information only.

On-screen: [Results Comparison tab.]

Results comparison presents longitudinal performance tracking for comprehensive exams as well as clinical mastery self-assessments. Changes in total exam score are presented in the table at the top. For exams that report content area results, changes in content area performance are presented in the table at the bottom.

On-screen: [Content Area Trends table.]

Statistically meaningful changes are indicated with colored arrows showing the direction of the change and filters are provided next to the table at the bottom to help refine your results.

On-screen: [Filters for minimum percent of questions, category, and content area.]

At the top right of every page are helpful links for more information about insights and a link to the insights survey.

On-screen: [Links to read user manual, watch instructional videos, and provide feedback.]
